Overview

The **Q-Lite™ Encryption** is a compact, single-board satellite modem suitable for integration into custom enclosures for portable communications and comms-on-the-move, supporting AES 256 Encryption as standard.

The Q-LiteE modem card has been designed for simple mechanical integration into OEM products, being small in size and with very low power consumption, the Modem is suitable for integration into custom enclosures for portable communications and comms-on-the-move.

The unit is compatible with our QFlex-400 Encryption rack mount satellite Modem and our standard QMultiFlex-400 Encryption capable Hub and QFlex-400 Encryption series satellite Modems.

The Q-LiteE supports Paradise Datacom's low latency Fastlink LDPC for latency sensitive applications and DVB-S2 / DVB-S2X, the most powerful and robust modulation and coding available for the space segment, supporting modulations from QPSK to 64APSK and data rates to 345Mbps. The Modem has an extended L-band frequency range, better RF performance, higher processing capability therefore allowing for future upgrades. Multiple serial interfaces are available or the unit may be used for L2 Bridging or L3 routing of IP traffic. In addition, the unit may be used in the highly efficient Trunking mode, where maximum performance is achieved in terms of bit rate and packets per second, with zero jitter.

It is ideal as a versatile point-to-point network modem or a remote modem in a point-to-multipoint network.

Monitoring and control of the modem is via Ethernet, with an option to fit a keypad and LCD display for local control. The Q-LiteE can also be provided in a half-width and ruggedised chassis.

Advanced Bandwidth-Efficient Features

Paired Carrier+™ is our enhanced carrier overlap technology that allows transmit and receive carriers to occupy the same space segment.

DVB-S2X, is between 20% and 60% more bandwidth efficient than its predecessor, DVB-S2.

Bandwidth-saving IP features include ACM, acceleration and header and payload compression.

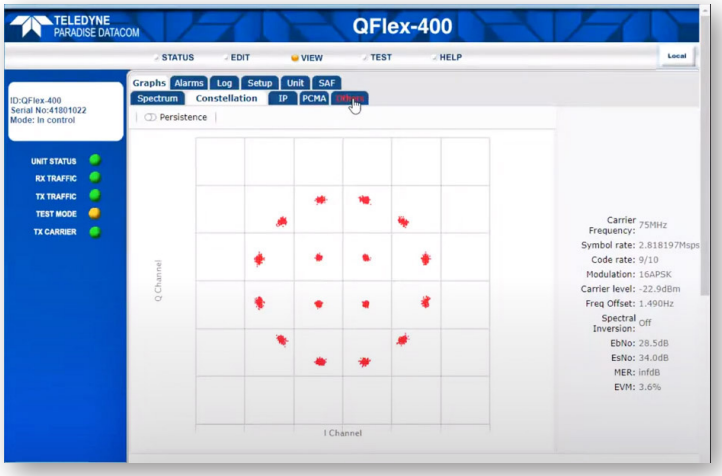
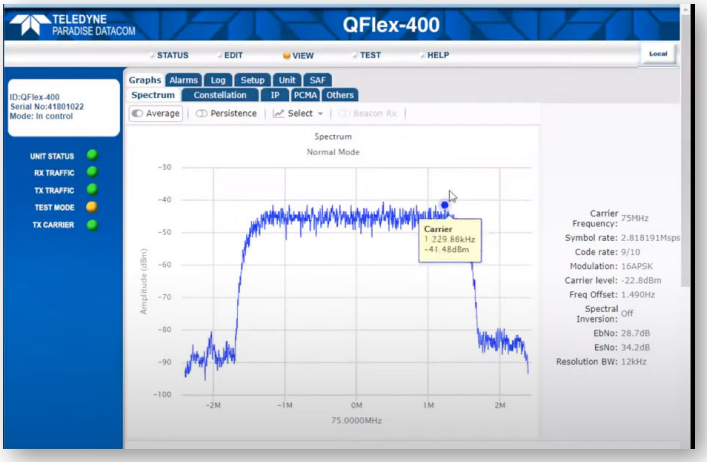
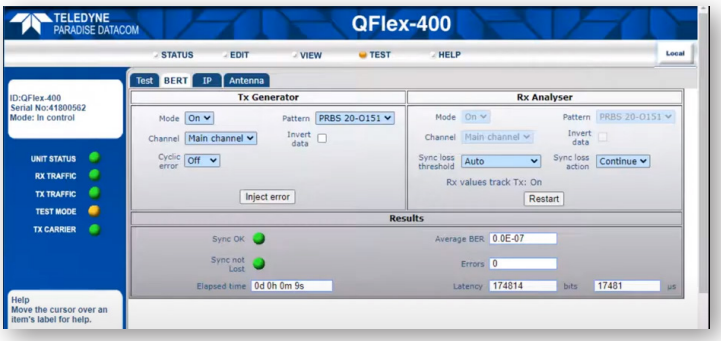
Powerful Onboard Test Equipment



Constellation view: The Rx Constellation Monitor can be used to check for correct modem operation including checking for signal distortion and phase noise. The persistence mode is useful for showing any long-term effects due to phase noise and interference.



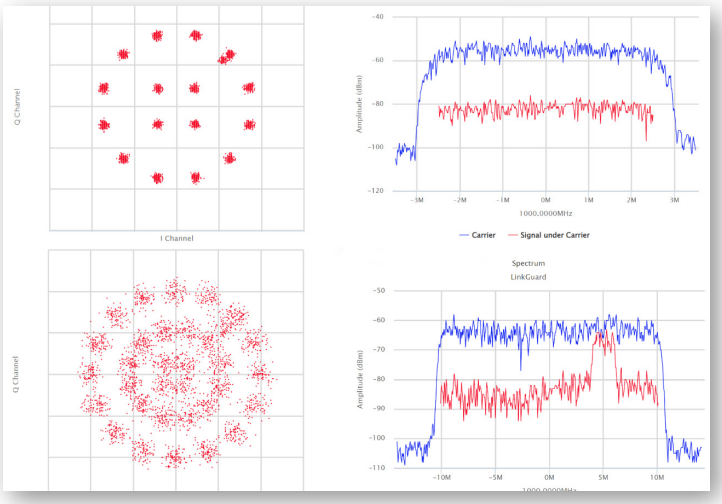
Spectral view: The Rx Spectrum Monitor is a powerful real-time spectrum analyser within the modem that is used to view the received signal spectrum. The monitor can not only display the wanted carrier but a Super Wide view allows checking for adjacent interfering carriers.



Inbuilt Bit Error Rate Test Set (BERT): The internal PRBS BER Tester allows pseudo-random bit patterns to be injected into the main traffic or overhead channel and the BER results to be monitored. Use of the ESC and AUX channels allows continuous real time traffic performance monitoring whilst the modem carries traffic. As well as average BER, number of bit errors and sync status, latency can also be measured.

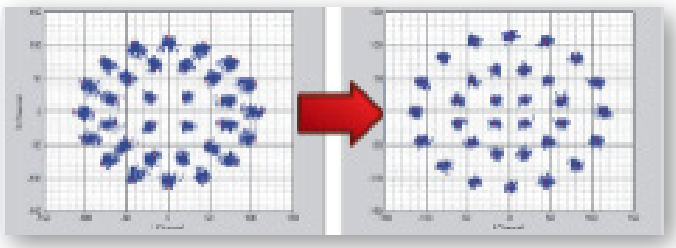
LinkGuard™ Interference Detection

Built-in Spectrum Analyser showing LinkGuard™ Signal-Under-Carrier interference detection without/with interferer present.



ClearLinQ™

'Before and after' constellations showing ClearLinQ™ Adaptive Tx Pre-distorter compensating for severe non-linear signal distortion to a 32APSK carrier.



Advanced Bandwidth-Efficient Features

The Q-LiteE™ modem supports the most powerful bandwidth-saving technology available.

DVB-S2X, is between 20% and 60% more bandwidth efficient than its predecessor, DVB-S2.

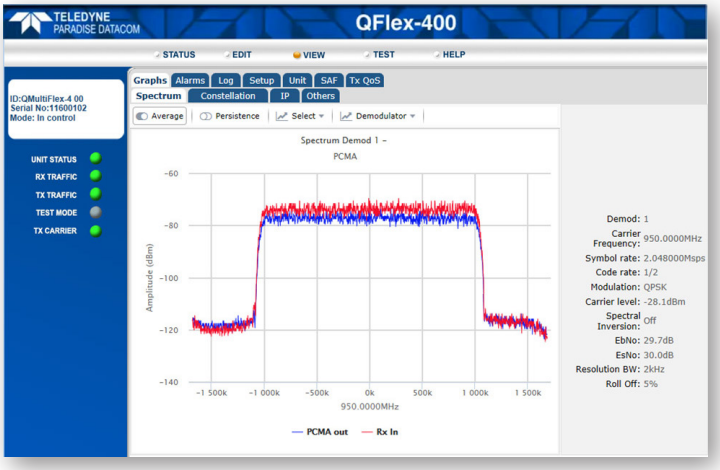
Paired Carrier+™ is our enhanced carrier overlap technology that allows transmit and receive carriers to occupy the same space segment.

XStream IP™ bandwidth-saving IP features include ACM, TCP acceleration and header and payload compression.

Paired Carrier+: used to reduce the occupied satellite bandwidth by up to 50% by overlaying the transmit and receive carriers in the same space segment. Adaptive self-interference cancellation is used to remove the unit's transmitted signal from the composite received signal, leaving just the desired signal.

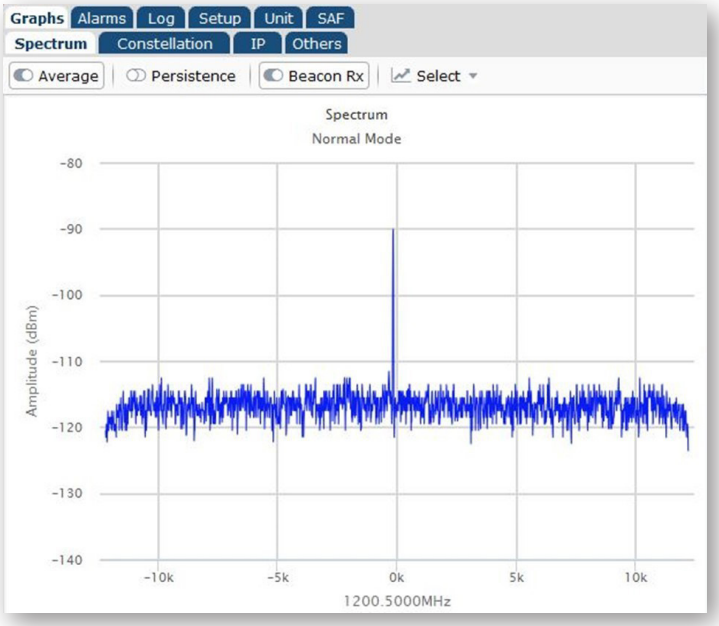
Included Network Management

Q-NET Navigator supports monitor and control of all Paradise modems from a single application. Includes easy-to-use navigation, support for multiple operator roles / access levels, continuous status / alarm polling and full access to all modem features. The web based Q-NET Navigator is included as standard, free of charge.



Beacon Receiver Function

Q-LiteE™ detects satellite beacon transmissions down to very low signal levels. This helps with automatic antenna pointing and removes the need for a separate beacon receiver.



The Q-Net Family

Q-Net is a fabric that allows each of the Q-Series modems to seamlessly interoperate giving you the ability to upgrade your network and re-use assets at will.

The different models have been thoughtfully designed to cover a wide variety of network situations flexibly and securely.

From models with WGS certification and encryption, to built-in features like 1:1 redundancy and test tools, we give you the lowest risk, highest return secure network available.

Terrestrial Interfaces (Please choose up to one hardware options) **Note**: Optional interfaces other than **TRANSEC** do not support Encryption	○	**EIA-530:** D25 DCE supporting RS422/X.21/V.35/RS232
	○	**Quad ASI:** 4xBNC 75Ω sockets; includes DVB-S/DSNG FEC (for use with ASI, or MPEG over IP, or general IP)
	○	**TRANSEC** provides an additional layer of protection for communication channels. It builds on, but is separate from, encryption of the payload and is a licenced software activated feature (SAF) limited to <25Mbps.
Optimised Spectral Roll-Off	○	Extends the standard 35%, 25% and 20% roll-off factors to include 5%, 10% and 15% roll-offs for TPC and legacy FEC's
Utilities Card	○	**Add-on card** size: 168mm x 104mm 9-way D type for 1:1 and 1:N redundancy (compatible with Q-NET PDQS Redundancy Switch) 15-way D type for alarms (4 independent Form C relays for unit, Tx, Rx and deferred alarms), Tx Inhibit signal and scalable DC voltage output for antenna pointing USB connector for software upgrades, etc. Second fan for environments where extra cooling is required FSK signalling
Antenna Pointing Card	○	Smaller, lighter, lower power alternative to Utilities Card that provides **AGC output for antenna pointing** (along with Tx Inhibit and Rx Lock status) and serial RS232/RS485 M&C bus (alternative to Ethernet control). Scalable 0 to 10V DC output signal represents any of the following: Receive power level Receive composite signal level Demodulator AGC level Eb/No
ClearLinQ™	○	**Adaptive Tx Predistorter:** Corrects for linear & non-linear distortion in the RF chain (amplifier & transponder). Applicable to all FECs and modulations
DVB-CID	○	**DVB Carrier ID:** Tx carrier identification per ETSI 103 129
IBS	○	Satellite framing to IES 309 with low-rate Intelsat ESC (to IES 403) and high-rate IBS ESC
Legacy FEC	○	**Sequential FEC** (limited to maximum of 2.048Mbps); TCM 8PSK 2/3 to IES 310; Viterbi BPSK/QPSK/OQPSK FEC rates 1/2, 3/4 & 7/8; Intelsat Reed-Solomon outer codec
